SUMMARY

Senior backend-leaning engineer, **7 years**, building distributed systems in **Java / Spring Boot** and **Angular** across payments, logistics, and healthcare. Owns services end to end — architecture, encryption, SSO, CI/CD — and has delivered **5×** performance gains. Grounded in algorithms, data structures, and system design.

SKILLS

Architecture:	Distributed Systems, Microservices, Event-Driven Design, CQRS, API Design
Languages & Frameworks:	Java (Spring Boot, Hibernate, JPA), TypeScript, Angular, Node.js, JavaScript (ES6)
Data & Messaging:	Kafka, Redis, Oracle DB, PostgreSQL, MySQL, MongoDB
Cloud & Tools:	AWS, Docker, Kubernetes, CI/CD (GitHub Actions), Git, Datadog, Splunk, JUnit
AI & Automation:	AWS Textract, document summarization & classification, AI-assisted development tooling

EXPERIENCE

Simplify3x — Senior Software Developer May 2024 - Present — Bangalore, India

- Lead the migration of a **450k+ LOC** legacy **Pascal** platform to **Spring Boot** and **Angular** microservices, owning service decomposition; **10** modules live, AI-assisted tooling cutting manual effort **80%**.
- Designed a Kafka-driven **AI SmartOps** service for **50K+ emails/month** at peak — PHI extraction via **AWS Textract**, content summarization, and auto-created tickets with inferred priority, cutting manual effort **60%**.
- Designed the data-protection and identity layers for off-premise workloads — **Protegrity** encryption for sensitive fields, and **Okta**-backed **SSO** securing federated access across the migrated services.
- Owned the backend of a campaign outreach analytics platform on **Oracle DB** (JPA, JDBC Template), with **Hibernate Envers** audit trails making every campaign change traceable for compliance.
- Mentor **3–4** engineers across the migration and **AI SmartOps** workstreams, running design reviews and setting the API and service-boundary conventions used across the team.

Infosys (Contract) — Senior Frontend Engineer Sept 2023 - Apr 2024 — India

- Led the frontend re-architecture of the **Income Tax Department** e-filing portal serving **85M+ taxpayers**, converting a legacy **Angular** codebase into **4** reusable custom libraries and cutting duplicated code **40%**.

Sarvm.ai — Senior Software Development Engineer Feb 2022 - Aug 2023 — Bangalore, India

- Designed and shipped a **UPI Intent Flow** for instant merchant payouts, eliminating third-party gateway fees and driving **15% revenue growth**.
- Re-architected the logistics serving path with **Geohash** lookups, **Redis** caching, **CQRS** and **event sourcing**, cutting response time **3s → 600ms** and database load **80%** (*Node.js, Kafka, MongoDB*).
- Built a reusable **Node.js** package adopted across **5 applications** via GitHub Package Registry, plus the **CI/CD** pipelines behind it, improving **time-to-market 40%**.

Zreyas Technology — Web Developer Aug 2021 - Dec 2021 — Kolkata, India

- Replaced long polling with **WebSockets** in a real-time IoT feedback system, cutting latency and network load (*React.js, Express.js, AWS, MongoDB*).

Independent Software Consultant Feb 2020 - Aug 2021 — Remote, India

- Built and launched **StrayDopt**, a cross-platform stray-animal adoption app (*Ionic-Angular, Firebase*), and delivered contract platforms for multiple clients including a logistics product with real-time **GPS** tracking and **MQTT**-based IoT messaging (*React Native, Node.js, MongoDB*).

Sketch Web Solutions — Web Developer Jun 2019 - Feb 2020 — Kolkata, India

- Built the purchase module (REST APIs) for a POS system spanning Android (Java) and web, with database triggers guaranteeing fail-safe transactions (*CodeIgniter 3, MySQL*).

EDUCATION

B. Tech, Computer Science & Engineering, MAKAUT (formerly WBUT)

Aug 2015 - Jun 2019
